

# GPS/GSM TRACKER Introduction

---

GPS Designer Intl. CORP.

[www.secugis.net](http://www.secugis.net)

# Application

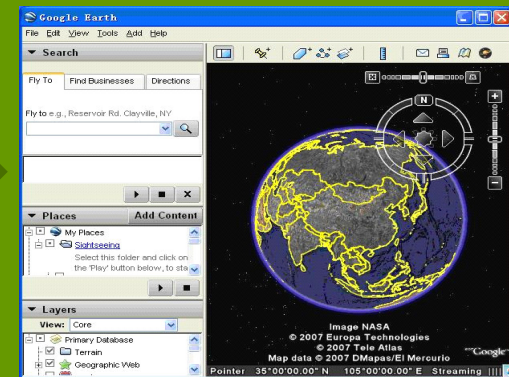

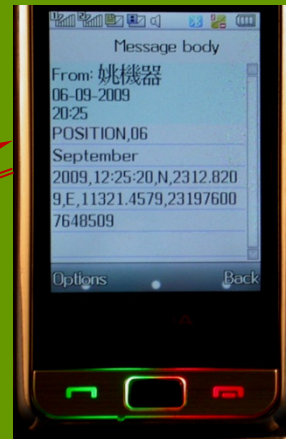

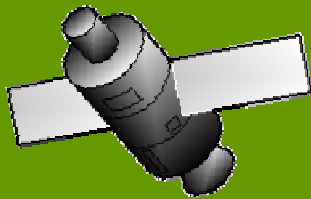

---

- GPS Phone With Personal Locator
- Pet locator /Personal Locator
- Fleet management / Vehicle Locator.
- Logistic Management System

# Combo A ( work on mobile phone )

**Solution is one tracker work with cell phone or SMS**

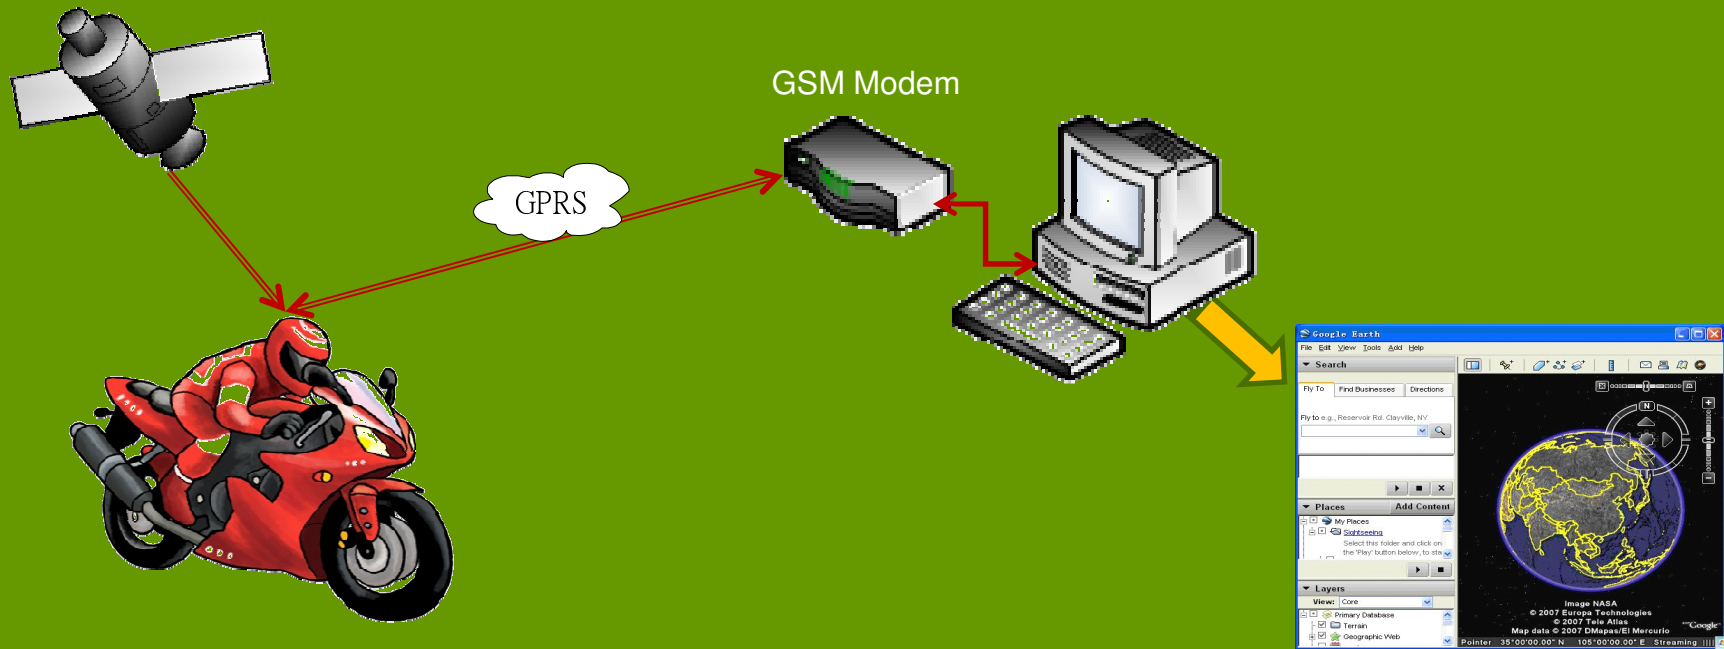

1. User could control and locate the car with cell phone or SMS.
2. What he needs to do is to send one short message.
3. But only not perfect is that the position information is coordinates. Because To many people, the coordinates are only numbers and meaningless. User could look this coordinates with Google earth or Google map. In all, this is simplest usage of the tracker.

# Combo B ( work on Personal Computer )

**Solution is for personal computer**, user just want to see he's tracker on the Google earth real time.

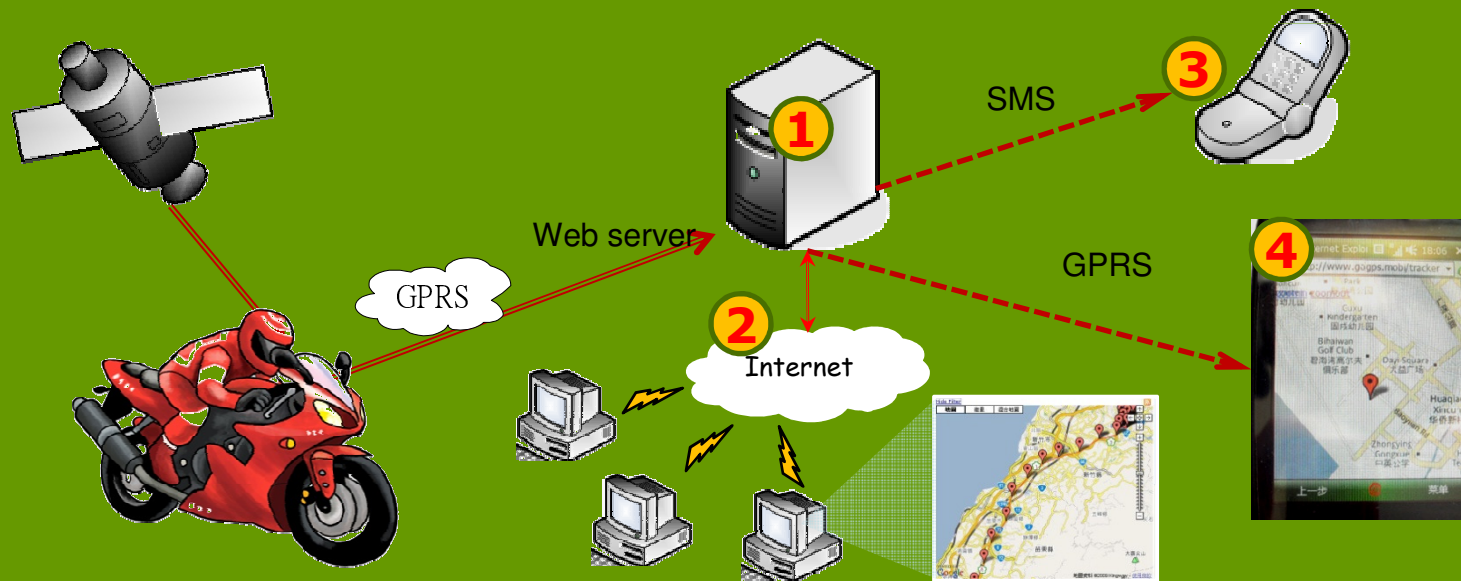

1. User need connect a GSM modem with computer, and then install the software to pc.
2. This solution can automatic show user's tracker real time on the Google earth , And it use SMS/GPRS to transfer
3. Package: Tracker unit+GSM modem+software

# Combo C (Work on Web server)

## Solution is for professional large tracking system

1. The web server have to install software and application module, It supports hundreds or thousands trackers for user to locate and management. For ezample <http://www.yourtracking.info>
2. User could see their tracker on Google map with IE.
3. User could see their tracker on mobile phone in position address.
4. User could see their tracker on Google map with mobile phone.
